Acute

Oral LD50 Rat: 5000 mg/kg
Oral LD50 Mouse: 1720 mg/kg

12 ECOLOGICAL INFORMATION

Ecotoxicity:

The effect of this product on aquatic organisms is rapidly and significantly mitigated by the presence of dissolved organic carbon in the aquatic environment as found in most surface waters.

Fish Based on the toxicity of the components using the Conventional Method
LC50/Danio Rerio/96 hr > 10 -100 mg/L (OECD 203)

Algae Algal inhibition tests are not appropriate. The flocculating characteristics of the product interfere directly in the test medium preventing homogenous distribution that invalidates the test.

Daphnia Based on the toxicity of the components using the Conventional Method
EC50/Daphnia Magna/48 hr > 50 mg/L (OECD 202)

Environmental Fate: The product is rapidly eliminated from the aquatic medium through irreversible adsorption onto suspended matter and dissolved organics.

Bioaccumulation: Does not bioaccumulate.

Persistence/ Degradability: Not readily biodegradable.
